

Original Article

Assessment of the Efficacy of Procalcitonin, C-Reactive Protein, and Albumin Levels-guided Antibiotics Use in Sepsis

Junyue Cao¹ and Yuchao Sun².

Supplementary Files

Supplementary table 1. Blood-culture positivity and antibiotic strategy by study arm.

| | Control (n = 64) | Biomarker (n = 63) | <i>P</i>-value |
|---|-----------------------------|-------------------------------|-----------------------|
| Blood-culture positive, n (%) | 24 (37.5%) | 23 (36.5%) | 0.92 |
| Culture-targeted therapy \leq 72 h, n (%) | 18 (28.1%) | 17 (27.0%) | 0.93 |
| Empiric-only therapy, n (%) | 46 (71.9%) | 46 (73.0%) | 0.88 |
